

ARMOR BETA INDEX

Equity Armor Investments, LLC ("EAI") is a Commodity Trading Advisor (CTA) offering an algorithmic managed futures program that combines a notional net long S&P 500 futures positions with EAVOL Index, which trades VIX futures, in order to act as a volatility overlay to the long beta position in the stock market. Allocations are based on notional account values and then implemented in S&P 500 futures and NASDAQ 100 futures + EAVOL Index methodology, using the firm's proprietary models to implement the holdings.

Equity Armor Investments, LLC ("EAI") is an SEC Registered Investment Advisor under the Investment Advisors Act of 1940. The information provided herein is general in nature.

EAI may only render personalized investment advice in those states and international jurisdictions where it is registered, or otherwise excluded, or exempted from registration requirements. EAI ARMOR BETA INDEX, DESCRIBED HEREIN, IS A HYPOTHETICAL INDICATIVE CALCULATION PRIOR TO OCTOBER 2019.

The RETURNS shown are speculative, and entails substantial risks, which may place your capital at risk should you invest in the strategy. No guarantee or representation will be made that the strategy will be successful.

Performance results for clients that invest in the strategy may vary from the actual and hypothetical results shown, due to market conditions and other factors including client objectives, investment cash flows, size and timing of investment purchases and sales, trading costs, frequency and precision of order execution, cash balances, and custodial fees. *The hypothetical returns shown do not include an annual fee, trading commissions, and expenses. The net compounded impact of the deduction of fees over time will be materially affected by the amount of the advisory fees, the time period services are provided, and investment performance. Transaction fees, advisory fees, asset servicing and administrative fees, and management fees (performance fees and fixed or variable fee schedules) may be applicable to the total asset base or to individual holdings. Transaction fees are incurred through the trading of assets; thus, high turnover equates to high transaction costs. Asset selection subjects' users to commissions, incentives, issuance fees, purchase fees, redemption fees, and exchange fees related to specific holdings. Periodic fees, such as management fees and account maintenance fees, may have breakpoints where, depending on the amounts involved and client eligibility, the level of fees changes. The various combinations and permutations of (1) type of asset, (2) time held, and (3) existence of waivers, reimbursements, and recoupments may also determine the fee applied. Some fee structures include return targets that must be met, sometimes over a specific time frame, before the fee can be levied, but information on progression toward the targets is not always provided.

The data used for this performance report was organized by the staff at EAI. Errors could have occurred in the data, calculations, or preparation of the report.

EAI used comparable indices to the strategy. The S&P 500 Total Return Index was used to compare a portfolio consisting of similar standard deviation profiles as the EAI Armor Beta Index.

*PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS

Footnotes to Capsule Performance Information "Draw-down" means losses experienced by the program over a specified period. "Largest Monthly Percentage Draw-Down" is the largest monthly loss experienced by the program in any calendar month expressed as a percentage of the total equity in the program and includes the month and year of such draw-down.. "Largest Peak-to Valley Draw-down" is greatest cumulative percentage decline in month-net asset value due to losses sustained by the trading program during a period in which the initial month-end net asset value of the program is not equaled or exceeded by a subsequent month-end net asset value of the program and includes the time period in which it occurred.. The monthly "Rate of Return" is computed by dividing the net income by beginning equity after factoring into beginning equity changes. The monthly rates are then compounded to arrive at the annual rate of return. Rate of Return for any specific month depends on accounts excluded for the month based on start/close period and substantial capital movement.
